

Solution Architecture

Team ID: SWTID-2026-5919

Project Name: Script-Controlled ACL – Restrict Record Access Based on Field Value

Solution Architecture Diagram

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides the user interface for users to log in, view records, and perform permitted operations.	ServiceNow User Interface, Forms, Lists
Application Layer	Handles user roles, access permissions, and application-level security logic.	ServiceNow Platform
Authentication / Role Verification	Verifies the logged-in user and identifies the roles assigned to the user.	ServiceNow User & Role Management
ACL Layer	Controls Read, Create, Write, and Delete operations based on assigned roles and access rules.	ServiceNow ACL, Server-Side JavaScript
Branch-Based Access Control	Uses the Branch field and ACL logic to control access to applicable records.	ServiceNow ACL Script
Database / Data Layer	Stores student and institution-related information in the custom table.	ServiceNow Database, Custom Table

Testing / Administration	Allows administrators to configure roles, ACLs and verify access permissions.	ServiceNow Developer Instance, Impersonation
---------------------------------	---	--

Architecture Flow

User → ServiceNow UI → Authentication & Role Verification → ACL Evaluation → Branch/Permission Check → Institution Details Table → Access Result

The architecture follows the template's layered approach, which separates the presentation/client layer from the application/security processing and data/storage layer.
