

Project Executable Files

Date: 15 March 2026

Team ID: SWTID-2026-5919

Project Name: Script-Controlled ACL – Restrict Record Access Based on Field Value

Maximum Marks: 3 Marks

Step 1: Submission Checklist

S.No	Item to Submit	Submitted
1	Complete source code (all files and folders)	N/A
2	README / Setup Guide	Yes
3	requirements.txt / package.json / dependency file	N/A
4	Database schema / seed files	N/A
5	Environment configuration file (.env.example or similar)	N/A
6	Deployed application URL	N/A
7	APK / Executable binary	N/A
8	Dockerfile / Containerization config	N/A
9	Test files and test results	Yes
10	Demo video or walkthrough	N/A

Note: The project is implemented within the ServiceNow platform using tables, roles, ACL configurations, and scripts. Therefore, application-specific files such as requirements.txt, APK, Dockerfile, and standalone executable binaries are not applicable.

Step 2: File / Folder Structure

The project is implemented as a ServiceNow platform configuration rather than a conventional source-code application.

```
Script-Controlled-ACL/
├── User & Role Configuration
│   ├── EEE User
│   │   ├── bb1
│   │   ├── bb2
│   │   ├── bb3
│   │   └── bb4
│   └── Custom Table
│       └── u_institution_details
├── ACL Configuration
│   ├── READ ACL
│   ├── CREATE ACL
│   ├── WRITE ACL
│   └── DELETE ACL
├── Testing & Verification
│   └── User Impersonation Testing
└── Project Documentation
    └── README.md
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	N/A – ServiceNow platform project
Login Credentials (Demo)	Not specified in the project document
Platform / Hosting Provider	ServiceNow
Repository Link	Not specified
Demo Video Link	Not specified

Step 4: Run Instructions

The project is executed and verified within the ServiceNow platform.

1. Log in to the ServiceNow instance.
2. Create or access the **EEE User** used for testing.
3. Configure the roles bb1, bb2, bb3, and bb4.

4. Access the **Institution Details** custom table.
5. Verify the table name `u_institution_details`.
6. Navigate to **System Security** → **Access Control (ACL)**.
7. Elevate to the `security_admin` role when required.
8. Verify the READ ACL and its Branch-based access condition.
9. Verify the CREATE ACL with the `bb2` role.
10. Verify the WRITE ACL with the `bb3` role.
11. Verify the DELETE ACL with the `bb4` role.
12. Use user impersonation to verify the configured access permissions.
13. Confirm that administrators have the expected full access.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	The project depends on the ServiceNow platform and its configured instance.	Execute and verify the project within the configured ServiceNow environment.
2	Standalone application files such as APK, Dockerfile, and dependency files are not applicable.	The project is implemented using ServiceNow configuration and ACL scripts.
3	Demo URL, repository link, and demo video are not specified in the project documentation.	Not provided in the available project source.

Project Execution Summary

The project can be demonstrated directly in ServiceNow by verifying the custom **Institution Details** table and its role-based ACL configuration. The complete workflow covers controlled **READ, CREATE, WRITE, and DELETE** access and verification through user impersonation.
