

Coding & Solution

Team ID: SWTID-2026-5919

Project Name: Script-Controlled ACL – Restrict Record Access Based on Field Value

Solution Summary

Field	Details
Repository Link / URL	Not applicable – project developed and configured directly in ServiceNow Developer Instance
Programming Language(s)	JavaScript
Framework(s) Used	ServiceNow Platform
Key Features Implemented	Custom Institution Details table, user and role creation, role-based ACLs, Branch-based access control, Read/Create/Write/Delete permissions, Admin full access
Pending / Incomplete Features	None
Setup / Run Instructions	1. Open the ServiceNow Developer Instance. 2. Configure the Institution Details custom table. 3. Create roles bb1, bb2, bb3 and bb4. 4. Assign roles to users. 5. Configure the required ACLs. 6. Create Institution Details records. 7. Impersonate users with different roles and verify access permissions.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into separate ACL configurations	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Access restrictions and unauthorized operations are handled	Yes
5	The solution runs without critical errors	Yes

6	Code/configuration is maintained in the ServiceNow Developer Instance	Yes
---	---	-----

Additional Notes / Comments

The solution implements role-based and field-based access control using ServiceNow ACLs. Separate ACLs are used for Read, Create, Write, and Delete operations. The solution is designed to prevent unauthorized users from accessing or modifying protected Institution Details records.

The coding section of the template requires the solution to address the core problem and functional requirements and to include the necessary configuration/setup information.
