

Customer Journey Map

Team ID: SWTID-2026-5919

Project Name: Script-Controlled ACL – Restrict Record Access Based on Field Value

	Stage 1 – Login & Access	Stage 2 – Record Access	Stage 3 – Perform Operations
Actions	User logs in to ServiceNow and accesses the application.	User opens the Institution Details records and tries to view authorized records.	User performs allowed operations such as Create, Write or Delete based on the assigned role.
Touchpoint	ServiceNow login and application interface.	Institution Details table and student records.	Record form, list and ACL-controlled operations.
Customer Thought	"I should be able to access the system securely."	"I should see only the records I am authorized to access."	"I should be able to perform only the operations allowed for my role."
Customer Feeling	Secure and attentive.	Confident when unauthorized records are restricted.	Satisfied when the required operations work correctly.
Process Ownership	ServiceNow administrator / System administrator.	ACL and security administrator.	ACL and role management administrator.
Opportunities	Provide secure and role-based login access.	Improve field-based and role-based record restrictions.	Clearly separate Read, Create, Write and Delete permissions.

Stage 1 – Login & Access

Actions

- Log in to ServiceNow.
- Access the application.
- Authenticate as an authorized user.

Touchpoint

- ServiceNow login page.
- Application interface.

Customer Thought

- “I should be able to access the system securely.”
- “My access should depend on my assigned role.”

Customer Feeling

- Secure.
- Attentive.

Process Ownership

- ServiceNow Administrator.

Opportunities

- Improve role-based access.
- Provide secure authentication.

Stage 2 – Record Access**Actions**

- Open the Institution Details table.
- View student records.
- Check records based on the user's authorization.

Touchpoint

- Institution Details table.
- Student record list and form.

Customer Thought

- “I should see only the records I am authorized to access.”
- “Unauthorized records should not be visible.”

Customer Feeling

- Confident.
- Secure.

Process Ownership

- Security / ACL Administrator.

Opportunities

- Apply field-based access control.
- Restrict unauthorized record viewing.

Stage 3 – Perform Operations

Actions

- Create records.
- Edit records.
- Delete records when permitted.
- Perform operations according to assigned roles.

Touchpoint

- Record form.
- List view.
- Create, Edit and Delete options.

Customer Thought

- “I should be able to perform only the operations allowed for my role.”

Customer Feeling

- Satisfied.
- Confident.

Process Ownership

- ACL and Role Administrator.

Opportunities

- Separate permissions for Read, Create, Write and Delete.
- Test access using different user roles.
